Note : In the next section there is an update in the ***rehash( )*** function.

Within the function this for loop exists, in this loop instead of ***ll.remove()***, we have to use ***ll.get(j)***;

```
//nodes -> add in bucket
for(int i=0; i<oldBuck.length; i++) {
    LinkedList<Node> ll = oldBuck[i];
    for(int j=0; j<ll.size(); j++) {
        Node node = ll.remove();
        put(node.key, node.value);
    }
}
```
